Muse joins CL:AIRE

Through Morgan Sindall Group plc's corporate membership of CL:AIRE (Contaminated Land: Applications in Real Environments) Muse now has access to the resources of an organisation which is dedicated to promoting the regeneration of contaminated land.

CL:AIRE was established in 1999 to raise awareness of practical and sustainable remediation technologies. It plays a unique environmental role in business and society, helping organisations like Muse manage the well-being of land and water resources.

The Environment Agency has estimated that 300,000 hectares of land at over 325,000 sites in England and Wales are contaminated with a variety of pollutants. CL:AIRE promotes the clear benefits of remediating and re-using this land.
